# DUE SOUTH WINE LIST

In **DUE SOUTH WINE LIST** you will find a number of organic, biodynamic and natural wine, and 100% European wines. Below are a few definitions to help you understand why...

## Organic

A wine made from organically grown grapes has no chemical residue from pesticides, herbicides, or chemical fertilizers. Organically grown grapes come from living, breathing soil, full of microbial life unhampered by unnatural treatments. These grapes are generally healthier and more alive, with a higher content of natural trace elements and minerals (broken down by the microbes in the soil and absorbed by the vine's root system).

This brings forth better tasting fruit, rich in minerality and "terroir" that is unique to the soil from which it was bred. Organic viticulture is also better for the environment. An organic vineyard does not contribute pollution to the air, ground water, or to its neighbours, and encourages life on all levels rather than discouraging it through chemical treatments.

## Biodynamic

Biodynamic viticulture takes the principles of organic farming to a higher degree. Biodynamic viticulture, or simply biodynamics, a branch of viticultural science conceived by Rudolf Steiner in the 1920s, stresses the importance of the many balances (and imbalances) in nature that effect the health and homeopathic strength of the vine, and the relationship of the vine with the vital life forces that supports its very existence.

Biodynamics emphasizes natural holistic treatments to increase the vine's resistance to disease, as well as a biorhythmic approach to treatments, pruning and harvesting resulting in healthier vines and better tasting fruit. Biodynamics is a common sense approach to viticulture employing age-old wisdom that studies the relationship of the vine with the sun, moon, stars, and earth.

A biodynamic vineyard is in complete harmony with its surroundings, and is generally a self-sufficient entity. Biodynamic vineyards are always environmentally friendly, respecting the earth and their natural surroundings.

## Natural

Natural wine is wine made with as little chemical and technological intervention as possible, either in the way the grapes are grown or the way they are made into wine. The term is used to distinguish such wine from wine which is 'organic' in the sense of having been 'made from organically grown grapes', but which is subject to technical manipulation in the winemaking process.

Most definitions of natural wine include the following :

- Hand-picked, organically or biodynamically grown grapes.
- No added sugars, no foreign yeasts.
- No fining or filtration.
- Little or no added sulphite.

## Why a European wine list

Although there is an opinion that new world wines are not as bad as we had thought regarding their carbon footprint and despite the fact that they are also very popular, we have decided to keep our wine list exclusively European as we take pride in not only offering you great products, but also challenge ourselves in finding great products that are close by in the old Europe, wines that ought to be discovered.

*Enjoy!*
